RE: FILE CONSTRUCTION – LETTER OF RECOMMENDATION

To Whom it May Concern:

Having worked diligently with File Construction on the Brazos Mutual Domestic Water Consumers Association – Supplemental Well Development project this past Winter and Spring, I would highly recommend File Construction for the construction of forthcoming utility improvements projects.

File Construction has successfully completed several infrastructure improvements projects throughout New Mexico under the direction of Jaime Cruz, their General Manager. The expertise of the operators, pipefitters, and laborers who worked on the Brazos MDWCA project was professional and efficient.

The office staff supporting our construction effort have been brilliant. Their attention to detail has been professional from the response to emails, requests for payments, to the materials submittals. Their response to field change conditions, and their subsequent change order were equitable.

Please note, while on site developing the new supplemental well, File Construction also repaired existing system leaks for the Brazos MDWCA, and potholed locations of a complicated network of existing water mains in and around the existing Well House #3. This effort helped establish locations of functioning water mains, valves, and connections, along with validation of abandoned lines.

Based on the above-referenced expertise and professionalism, I highly recommend File Construction for building new infrastructure improvements projects.

Please feel free to contact me should you have any questions or concerns with this letter of recommendation for File Construction.

Respectfully yours,

John Schrandt, P.E.
